

S.M.C. - Smart Mobility Control

SMC® is THE cloud-based solution with which you have everything under control.

Through the **SMC® – Smart Mobility Control** platform and its associated components, the full potential of digitization is optimally exploited. In combination with open interfaces **SMC® can be easily integrated into existing systems.**

Individual solutions are possible through the **SMC®** system architecture can be realized on request.

SMC® – Smart Mobility Control

enables the traffic continuously and at an early stage and informs the road users. This ensures an optimal flow of traffic.

Application areas

- » Parking Space Management
- » Construction Site Management
- » Eventmanagement
- » Infrastructure Manegement

Benefits

Road safety increase

Through the use of **SMC® – Smart Mobility Control** and the associated networked components, you can achieve **greater mobility** while **increasing road safety** at the same time.

Advanced detection techniques detect changes in traffic in real time. **SMC®** decides fully automatically on measures to increase route availability and traffic safety.

Flexible work

SMC® – Smart Mobility Control

is designed as a modular system. All **system components** can be **connected** individually and the desired functionalities are mapped on the **SMC®** platform. This allows for maximum flexibility in the various possible applications.

Sustainable act

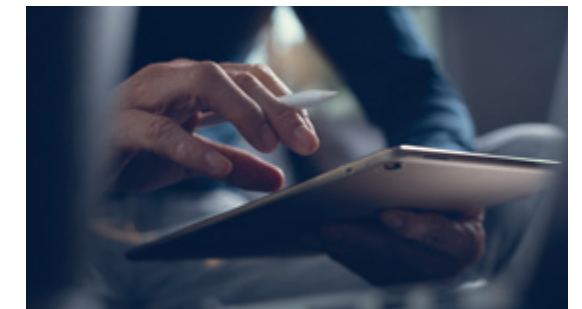

By using the innovative and sustainable system architecture, **SMC® – Smart Mobility Control** can also safely solve critical traffic situations. This not only **reduces CO2 emissions**, but also **protects** our unique **environment.**

All **SMC® – Smart Mobility Control** systems can be **operated self-sufficiently in terms of energy.** This saves precious energy and reduces costs.

24/7 Real-time information provide

SMC® – Smart Mobility Control provides the road user with continuous and up-to-date information about the traffic situation, such as alternative routes, travel times, traffic jam warnings or the number of available parking spaces on the **SMC® LED-RGB variable message signs** on site and in the **SMC® app** even before the start of the journey.

Ensure seamless digital control

Whether centrally on site or on the road, you control and monitor your systems according to your needs. With the **web-based SMC® – solution**, all data is available to you in **real time** and you always maintain an overview and full control of your systems. The clear and comprehensive system configuration also makes it possible to keep an eye on third-party systems at all times and to prove **each process by means of a time stamp.**

Be sure

SMC® – Systems are Made In Austria.

With us you get everything from a single source. Performance is our credo. This includes both the cloud-based system architecture and all roadside components. Our optimally **trained specialist staff** as well as the **large system warehouse** ensure that your projects can be implemented quickly and competently. Optimal maintenance schedules as well as **regular safety updates** ensure **trouble-free operation of** your systems.
